A few days back I did a post about how to waterproof your shoes and boots. This post was very popular on the Facebook page, and it got me thinking about whether there are ways to also waterproof clothing. Now I don’t just mean reproofing a waterproof jacket so the water beads off it again, I mean actually waterproof a fabric which doesn’t currently have any water repelling properties, such as non-waterproof jackets, hats, tops and pants.

I did a bit of research and I found a post on WikiHow which explains 4 methods of waterproofing fabric/clothing. To be fair one of the methods is an off-the-shelf product, but the other three methods are genuine DIY recipes. Check them out below, if you do try any of the recipes, let me know how you get on!

4 Ways To Waterproof Non-Waterproof Clothing
