Astonishing Acne Tip - Works In Minutes!

I'll keep this short and sweet! Everyone at some point or another suffers with acne and blemishes; they usually turn up at the most inconvenient times, things like dates, interviews and photographs etc. The next time you get an inconvenient spot or blemish on your face (or anywhere else for that matter!), give this a try and zap those zits!

**How To Reduce Acne Inflammation & Appearance In Minutes**

**You need just two things** - an aspirin and some water; simply crush an aspirin and add a little water to make a paste (not too wet). Now smear the paste on your acne and leave it on for 3-5 minutes and then wash it off with warm soapy water.

Your acne should now be far less red and inflamed and much less noticeable. The reason this works is because the salicylic acid in the aspirin reduces the inflammation and helps to clear the pores. Give it a try!
