When I first saw this DIY PVC toy sprinkler, I just knew I was going to build it for the kids. Our kids are three and six and like most kids, they'll just love this. To be honest, on a hot day I might just use it to keep cool too!

I love that this is so cheap and easy to build with off-the-shelf PVC pipe and connectors. For $10 this is a no-brainer to build to help the kids keep cool and have fun in the sun. Check out the
tutorial below for the parts list and build instructions. Build one this weekend! The kids will love it! I can see my kids running and cycling through it right now...

Awesome & Cheap DIY Kids PVC Sprinkler Summer Water Toy
