

Build A DIY Disaster Preparation Bucket

Categories : [DIY](#), [General Prepping](#)

These days you can purchase a whole range [ready made emergency disaster kits](#), the problem is - most of them are rubbish and they don't contain items that are required for your family's specific needs. The bottom line is - it is a much better idea to put your own emergency preparedness kit together.

If you are thinking about putting your own kit together, I would highly recommend giving some thought to creating a disaster preparation bucket. This basically means you will be storing your kit in a five gallon bucket with a lid. The main benefits of creating a disaster preparedness bucket are that five gallon buckets are cheap, durable and watertight. They are also easily found in an emergency and they are portable. Check out the link below for information and advice on creating your own disaster preparation bucket. The post also includes information and advice on what to include in your bucket.
