Build A Lightweight, Portable Camping Wind Turbine

Categories : DIY, General Prepping, Self-Sufficiency

I have seen and used plenty of lightweight/portable solar chargers for camping, hiking and bugging out etc, but this is the first time I have seen a small wind turbine charger designed for the same people. The whole thing weighs just 16 ounces and it comes apart and folds down. It would be a great back up to a solar charger for charging batteries etc. As long as there is a breeze, it will function and it obviously doesn't require the sun, so it can work day or night. Check it out!

Build A Lightweight, Portable Camping Wind Turbine

Books weigh something, but the knowledge they contain doesn’t; once learnt you carry that knowledge with you, wherever you go and whatever you face…
