

## Adapt AAA Batteries To Power Devices That Take AA Batteries

Categories : [General Prepping](#)

If you run out of AA batteries but have some AAA batteries laying around, you can convert the AAA battery into a AA battery with some tin foil. It got my remote (above) working a treat!

All you need to do is fold up a small piece of tin foil to fit (make up the size difference) at the negative (flat end of the battery with the -) end of the battery. You want enough tin foil to create a firm fit on the battery to ensure both the positive and negative terminals on the device are touching on the positive/negative ends of the battery.

This tip works great at a pinch, but it shouldn't be considered a permanent solution.
