

DIY \$50 Fire Pit Made From Concrete Tree Rings

Categories : [DIY](#), [General](#)

Fire pits are like barbecues - everyone should have one! There's nothing better than sitting out in the dark roasting marshmallows around the fire pit, it certainly beats sitting indoors addicted to reality TV...

If you don't yet have a fire pit, now's the time to make one! This really nice looking fire pit costs around \$50 (although it could be half this price if you have an old circular grill laying around) and the whole thing can be built in an hour or so, due to the clever use of concrete tree rings. Check out the tutorial below and build a fire pit this weekend! (If you want to make this project even cheaper, why not have a go at making your own [concrete tree rings](#)...)
