DIY Beautiful Solar Pathway

Could EASILY be made with FREE recycled stuff!

How awesome does that look? This solar light pathway is made with glass blocks and solar powered LED lights. In the tutorial below, most of the items used were purchased, but I think you could pick up almost everything required for free if you ask around...

For example when we moved into our house, the previous owner had left 15 of those glass blocks in the garage. They knocked around for a while and then I ended up just giving them away. Also if you didn't want the different colors, you could pick up some free unwanted solar garden lights, and utilize the solar panel and LED in the glass blocks; this method would also cut down on any wiring. If you want to give this a go, get on Freecycle (or similar) and see what you can acquire for free.
