DIY Beehive In A Jar Backyard Project

Categories : DIY, General, Homesteading, Self-Sufficiency

It seems strange to me now that K.W.N has been online for just over a year, and we have done 100s of DIY, emergency preparedness and homesteading posts, BUT this is the first post we have done about bee keeping...
I keep reading about beehives in jars, apparently with a bit of planning and consideration a small jar beehive can even work well in a suburban garden. Below is an awesome post/tutorial about building your own DIY backyard jar beehive, it is actually a pretty simple project. They have even included links to purchase the bees for your beehive! If you are interested in keeping your own bees, I highly recommend check it out. You could produce your own local organic honey and you would be doing something to help out our struggling bee population.
