DIY Bike Wheel Bow

Categories: General Prepping, Hunting & Fishing, Self Defense, Self-Sufficiency

We all know there are lots of DIY bows available to make, but non quite this bad-ass. It has a Rigid
frame, good power output, no knock required on arrows and best of all it has a Longer draw than a standard bow.

In an emergency situation this could be made pretty easily, imagine how many bikes will be out there and rubber would be everywhere too, or just make one to have because to buy a bow that has this power would set you back a few hundred dollars.
