Ok, firstly I should point out that this is a fairly large carpentry project, but if you are handy with the carpentry tools and you'd like a hidden room, this is an awesome project! This bookcase fits in an existing doorway, a cupboard doorway for example, and it makes excellent use of a very cleverly designed pivot... You would never know the doorway/room was there!

Whether or not you intend to build this DIY hidden room pivoting bookcase or not, you should still check out the photo to see just how awesome it is. If you think your carpentry skills are up to the task, there is an excellent step-by-step build tutorial, complete with photos and diagrams. Check it out below.
