DIY Survival Earth Shelter Dwelling

Categories: DIY, General Prepping, Wilderness Survival

The thing is, you can't see how awesome this underground shelter/bunker is from this photo alone, nor can you see how simple and straightforward it is to build if you have basic DIY skills...

A shelter like this would great for your secret bug-out location. This is about as low-tech as it gets, this shelter/bunker is more about grunt and man hours than it about skill and precision. If you can use a chainsaw, axe, hammer and shovel, you could probably build this shelter, given enough time. Check out the other photos of the build and the interior.
