

DIY Vegetable Basket - Pick And Wash With A Hose

Categories : [Growing your Own](#), [Homesteading](#)

I don't know about you, but when I started growing fruit and vegetables, the biggest shock to me, was not the time spent digging or weeding, it was the time spent picking, cleaning and preparing the produce.

This basket is an excellent idea, you pick your vegetables and then hose them down in the basket. It will be brilliant for root vegetables. Washing potatoes will be so much easier...

This particular basket is from RunnerDuck Resources and they have provided a quick tutorial listing materials and instructions on how to build it.
