

Easy To Make DIY Plastic Bottle Mosquito Trap

Categories : [DIY](#), [General](#), [Health/Fitness](#)

Nobody likes mosquitos... At best they are a nuisance, at worst, due to diseases they can carry, they are deadly.

Now I haven't tried these DIY plastic bottle mosquito traps, but they are very cheap/easy to make, and how they work with the yeast and CO2 makes a lot of sense as I know mosquitoes zero in on the CO2 we breathe out. I can see that making a load of these traps and placing them outside windows and doors could be a very effective way to reduce the number of of mosquitos coming indoors during the night. I am not sure how effective the traps will be to keep mosquitos down in the backyard etc, but you could try several of them scattered around in the same way as wasp traps.

Check out the tutorial below. Also be sure to checkout our post about [mosquito repelling plants!](#)
