EPA Approves The Use Of Dangerous Weedkiller

Categories : General, Health/Fitness

So if it isn't bad enough that most of our corn, corn products and soya products are genetically engineered, the EPA (which ironically stands for Environmental Protection Agency!) has now approved the use of 2,4-D which is an aggressive weedkiller that is strongly linked to an increased risk of cancer and Parkinson's disease. 2,4-D is thought to be especially dangerous to children.

The EPA approved the use of 2,4-D even after a strong protest from a group of prominent doctors and scientist highlighting the risks of spraying edible crops with this toxic weedkiller. Be informed and find out more about what you are eating on the link below...

EPA Approves Use Of Dangerous Weedkiller On Crops
