Excellent DIY Lightweight Tin Can Stove

Oh man, we've featured loads and loads of DIY stoves on K.W.N; everything from tiny soda can alcohol stoves, to larger tin can/brick rocket stoves, right the way through to larger DIY thermal mass stoves to heat your entire home...

Sometimes (in fact often) simplest is best and that is what I love about this stove. It's easy to make and it costs nothing, in fact it was made entirely from materials Paul had in his apartment! I love its simplicity, I don't need any more small stoves, but I am tempted to make one of these... I think this stove would be great for camping/hiking and emergency preparedness. It could also be cool to just have in the car, to break out for picnics etc
