How To Build An EXCELLENT 3 in 1 Stove From A GasTank
It's A Pizza Oven, Wood Stove & Patio Heater!

Firstly, the two photos above don't do this DIY stove justice. This might just be my favourite DIY stove of all time. I love the fact that it has an additional lid which turns it from a traditional stove/hotplate into a pizza oven. The other USP for this stove is that it has handles and can actually be moved (carefully) even when fired up...

If you can weld, or know someone who can, this stove is actually very straightforward to make, not to mention very cheap to make! I love everything about this stove, check it out...
