Hack An Ikea Cutlery Stand To Make A Great Hobo Stove

Categories: Cooking, Wilderness Survival

As many of you know, you can pretty much make a hobo stove out of any old tin or large can. These will do the job, but to be honest, they are usually a bit rubbish.

If you head down to Ikea and pick up an 'Ordning' cutlery stand (cost $5 I think, but it is solid stainless steel!) you can make a professional looking, durable hobo stove you'll be proud of, that will last forever. It is totally 100% worth the $5 as you'll have a great little stove when you are done.

Once you have your 'Ordning' cutlery stand, all you do is cut out a window (see photo above) to feed the stove and you are done! The easiest way to do this is with a Dremel multitool or similar device.
This stove would be great for a bug-out-bag or for any kind of solo hiking or camping. The beauty is you have no fuel to buy or carry. You just collect twigs and pine cones etc on your travels and you are good to go.

If you fancy something a little bit more up-market, check out this Ultra Light Weight Wood Survival Stove

. This is very, very nice....
