How To Build A 300 Square Foot Hoop House For Less Than $500

Categories: DIY, Homesteading

Our friends over at Natural Living Ideas have just created an amazing post/tutorial detailing how to build a huge 300 square foot greenhouse for less than $500. That's right, 300 square feet of protected growing space for under $500! But that's not all - this 12'x24' hooped greenhouse has a ceiling height of 6'8" ceiling height and the design makes it pretty windproof as well.

This really is a high quality tutorial - it includes detailed advice on choosing a location for the greenhouse, tips for preparing the ground, and step-by-step technical information on how to build the actual structure.

If you have ideals about living off-the-grid, or being self-sufficient, you really want to be looking at
building a hoop style greenhouse around this sort of size, so you can feed your whole family and generate plenty of food to preserve and store as well.
