

## How To Build A \$50(ish) Greenhouse

Categories : [General Prepping](#), [Growing your Own](#), [Homesteading](#), [Self-Sufficiency](#)

Ok, firstly I should clarify the cost of the greenhouse; David the guy who built it did if for \$50, but he had a lot of stuff already laying around that he could reuse. If you are buying absolutely everything brand new, it will likely cost around \$150, but that is still cheap for such a large 165 square foot greenhouse. If you can recycle and reuse some of the materials, you'll be able to do it for much, much less. I think that given what I have laying around and what I can acquire cheaply or for free, I could build this greenhouse for around \$70...

The original tutorial has several updates that David has added down the line. These include things he would have done differently if starting over and some tweaks to the design. Make sure you read these before attempting to build.
