Build A Back Saving PVC Corn, Bean, Seed Planter

Categories: DIY, Growing your Own, Homesteading

Do you know what, I am not even 40 yet and already my back already protests after a short while of bending over planting seeds/beans etc, so God knows the problems this must cause for folks in their 50s, 60s, 70s etc, and others with back and joint conditions such as arthritis.

I have not looked properly, but I don't recall ever seeing a device like this planter in stores or advertised on the TV. This is surprising as it is immediately obvious that a great many gardeners would benefit from it. Anway, even if you can purchase them, there is not need as below is a tutorial from 'Sensible Survival' showing how to make your own back saving seed planter from PVC pipe.
