How To Build A Bicycle Generator

Categories: General Prepping, Homesteading, Self-Sufficiency, Urban Survival

You may be thinking this is a useless gimmick, it's not! You can easily generate 50 to 100 watts of electricity through relatively gentle cycling; if you use a mountain or racing bike with lots of gears; the gears give you a mechanical advantage that allows a greater return for less effort.

Please be careful when working with electricity, if in doubt, ask an expert for some help/advice...
