

How To Build A DIY Water Wheel Hydroelectricity Generator

Categories : [DIY](#), [Homesteading](#), [Self-Sufficiency](#)

Who wouldn't love free electricity? I would love to live completely off-the-grid and not have to worry about the rising electricity costs. It would also be a nice feeling to know that if the SHTF one day, we would still have power...

Below is a link to a webpage on 'Build It Solar' which shows how to build a DIY water-wheel hydroelectricity generator from mostly recycled parts. It also includes a FREE PDF with the build instructions, that you can download and print out. If you are lucky enough to have running water on your land, this would be an awesome project.
