How To Build A House With No House Payments Or Utility Bills

Categories : DIY, Homesteading, Self-Sufficiency

No house payments and no utility bills, that's the dream, right? Well maybe that dream isn't as far fetched as you might think!

The video above shows how one guy built a cabin for $2000, drilled his own well and installed a solar power system which provides for all the electricity needs which cost an additional $3000. One thing to note is that the land he has, which is a little less than an acre, was gifted to him, although he does go on to say he has purchased similar plots of land for around $400. Finally the last thing to note is that this video was uploaded in 2009, but even if you increase the costs inline with today's costs, this really is a great demonstration of what can be done with a minimal budget and a bit of hard work.
