

How To Build A PVC Squash/Cucumber Arch

Categories : [DIY](#), [Growing your Own](#)

We have done loads of PVC DIY posts on K.W.N. PVC pipe is relatively cheap and with all the connectors etc, it is quick and easy to build structures with. Use the K.W.N search facility at the top of the page and search: 'PVC pipe' to see the other PVC DIY posts we have done.

Below is a link to a tutorial (with beautiful photographs) by 'Get Busy Gardening' which shows how to make an awesome PVC pipe squash/cucumber arch. It is very quick and easy to build, and you could also grow other vines and climbers too. Check out the tutorial and get busy this weekend!
