How To Build An Earthbag Roundhouse

A while back I did a post: How to Build an Earthbag Dome this was a windowless dome building which would make a great root cellar or storage shed. Today I am sharing a tutorial to build a an earthbag roundhouse, complete with windows and doors.

This is very cheap and easy way to build a one room dwelling. The cost per sq foot of living space is just $11.50; anyone in the construction business knows that is crazy cheap....

The finished house looks beautiful, inside and out. The outside is plastered and whitewashed and it has a thatched roof, have a look and see how nice it looks. I can't see why you couldn't build several of these alongside each other to create a larger multi-room home. Check out the photo tutorial below.
