How to Keep Apples, Bananas, Tomatoes, & Other Fruits Fresher Longer

Categories: Growing your Own, Homesteading, Self-Sufficiency

Did you know that fruits produce an invisible, odorless, naturally occurring gas called Ethylene and this gas is what causes fruit to ripen and ultimately go bad.

Lucky for you that there are a few ways you can prevent this and with proper storage and temperature control, Apples can stay fresh and edible for up to a year! This is great to know if you find yourself out of a job and you want to stretch your food budget or in case SHTF.
