How To Make A 60 lb PVC Bow For Less Than $10

Categories : DIY, Tools & Gear

$10 and a few hours in the garage get you a 60 lb PVC bow that you can use to practise your skills and even hunt with. Now that's pretty cool.

I don't have any experience with bows and it is on my list of skills to learn, so I may well get out there and make one of these PVC bows myself.

Has anyone made a PVC bow like this? How did it turn out? Do you have any tips not included in the video?
