How To Make A Brick Rocket Stove For Around $6

Categories : Cooking, Urban Survival

All you need to do is get down to your local home depot and purchase 16 bricks and that's it! Check out the video and see how easy it is to build.

Given the benefits of a rocket stove, I think it is an excellent idea to have some spare bricks stored at home. They can be stacked out of the way somewhere and then, if you are ever without power, you can build the stove in around five minutes and be cooking within 20 minutes. Very simple and very effective, just how I like it!

If you want to make a larger stove - just get more bricks!

UPDATE: I have had some comments stating that using standard household bricks for this is unsafe as they can explode. I have build one of these brick stoves and it has been used several times with no issues. I can't really see why household bricks would explode due to the heat. I know using wet stones around a camp fire can cause them to crack and explode, so possibly this is where the theory is coming from. As with everything I post, please exercise a certain amount of common sense.
