How To Make A Infrared Night Vision Scope (On The Cheap)

Categories : DIY, General Prepping

To buy one you are talking around $200 for a night vision scope... Here you can make one from an old camcorder and some other low cost electronic accessories. Apart from that you'll need a glue gun, soldering iron, pliers and a multi-meter. Now I was a bit dubious about how well this would work, but at the end of the tutorial, there are some images shot through the scope in the dark; they look pretty impressive to me.

Or, just buy a night vision scope instead
