

How To Make A Simple Adobe/Horno Oven

Categories : [Cooking](#), [DIY](#), [General Prepping](#), [Homesteading](#), [Self-Sufficiency](#)

You guys loved the: [How To Build A Clay Oven \(Tutorial\)](#) post we did a while back, so when I saw this awesome tutorial on how to build a simple Adobe oven, I knew it would go down well too!

This DIY Adobe/Horno oven couldn't be simpler to build - it has an internal structure of old bricks, which is then covered with a mixture of mud and grass. Check out the tutorial below for step by step photos. I am not sure if this oven would stand the test of time, but it is so quick and easy to build, you could build a new one each year. Also, be sure to check out Peter's [Etsy store: NorthernWoodsCrafts](#).
