How To Make A Solid Fuel Tuna Can Stove

Categories: Cooking

This is a great idea from minimalistsurvival, that I have not seen it before...

It involves a candle like principle and requires only a tuna can, some cardboard and some candle wax. Optionally you can fashion a little stove pot holder from some chicken wire.

Apparently this stove will burn for around two hours. It's not really a serious survival stove, but it's a fun little project and it would be fine for a night or two light weight camping/hiking. Watch the video and let me know what you think. Also, head over to minimalistsurvival's YouTube channel for some more great videos.
