How To Make A Stun-Gun From A Disposable Camera

Categories : General Prepping, Self Defense

Firstly a warning - a disposable camera might be a toy, the stun-gun you can make with it, IS NOT! This is a self-defence weapon that can generate 30,000 volts and it should only ever be used as a last resort in self-defence. It is not one of those fun electric shock prank toys you shock friends with, so please don't use it on friends, family or pets.

I am sharing this tutorial as it enables preppers to make a very cheap, small/lightweight self-defence weapon to have at home, in the car, or in the bug-out-bag. The finished device is tiny, so it is a weapon that gives you the element of surprise, and this can make all the difference in a life or death SHTF scenario.

Read the tutorial below right the way through and heed the precautions and warnings before attempting this project. Do not attempt to make this stun-gun unless you are confident you can do so safely without endangering yourself or others unintentionally.

How To Make A Stun-Gun From A Disposable Camera

Before I get comments saying I should not be showing people how to do this, please note that this information has been online for years on YouTube, Instructables and eHow, some of the most popular websites on the internet.
