How To Make And Use Compost Tea – The Ultimate Organic Fertilizer

You maybe asking, what is compost teas, well, simply put it's a liquid fertilizer and disease suppressor that is made by soaking small amounts of biologically-active compost in water, often with other ingredients such as kelp or molasses to feed the microorganisms, but lots of others can be used, and then aerated over a period of one to two days.

The "tea" is then sprayed using a typical hand-held sprayer either directly onto plants, the soil, or it is applied as a soil-drench (root dip) for seedlings. See how to make your own today by clicking the link below
