How To Make Survival Cement

Also known as cob, it can be used as cement to repair walls etc, or you can make bricks from it...

Survival cement, or cob as it is traditionally known has been used for 1000s of years for building. It is made by mixing mud (the higher clay content the better), dry grass or straw and water together. You can then use it as a cement to repair walls or for laying bricks, or, you can actually make brick from the mixture. It is very versatile for survival and off-the-grid living.

You can find out how to make your own survival cement by visiting the 'Practical Primitive' post on the link below. You might also want to checkout or previous post: How To Build An Earth Oven For Nothing which shows how to build and outdoor pizza style oven from cob.
