How To Waterproof Your Shoes & Boots

Categories : DIY, General

I actually feel quite pleased with myself as I thought about this and actually did it to some hiking boots around 15 years back. It worked an absolute treat! I had the boots until recently and I never retreated them and they remained waterproof until the end...

I should clarify - this method only waterproofs the fabric/leather, if you step in water and it goes over the tongue/laces, water will get in here. That said this will keep the water/mud out for day-to-day hiking on trails and in wet grass etc. This method may affect the color/appearance of the leather/fabric, so don't use it on your best shoes! Watch the video and see how it's done.
