Make An Automatic Plant Watering System With A Plastic Bag Some Thread

Categories: General, Homesteading

I think the title pretty much sums this one up... If you either go away a lot, or you simply forget to water your plants, below is a simple tutorial showing how to make a very effective automatic plant watering system, using just a resealable plastic bag and some cotton thread.

This is such a simple thing to do and for most houseplants it works really well. The string acts as a wick and as the soil dries out, the wick pulls more water from the plastic bag. Seriously, check out the tutorial, it couldn’t be easier.
