Rain Barrels, Chicken Coops, and Solar Panels

Categories: DIY, General Prepping, Homesteading, Self-Sufficiency

We feature a lot of DIY projects from the Instructables website; usually in the form of individual DIY projects, but this post is a bit different... I have just noticed that the editors at Instructables have now started creating collections of some of the best tutorials, in specific categories. Today I am sharing the Rain Barrels, Chicken Coops, and Solar Panels collection, which as the name suggests, is a collection of tutorials relating to being more self-sufficient and living off-the-grid.

There are 21 different tutorials listed here, detailing how to build various solar power and wind power projects, as well as several chicken coop and rainwater collection projects. Check it out below and get busy!
