Super Cheap DIY Air Conditioning

Categories : DIY, General

Depending on where you live, for many people air conditioning is a must for the summer months - as important in the summer as heating is in the winter. The problem is, just like heating your home in the winter costs a fortune, purchasing and running AC is also very expensive. Air conditioning units consume a ridiculous amount of electricity...

There are several DIY alternatives to help you stay cool in the heat, such as the low cost DIY swamp cooler. I have just stumbled on this new method using a fan, some copper pipe and water. I am not sure how effective this method is, but on paper at least the theory seems sound. It's a low cost project that's also quick to put together. It might be worth a shot to see how well it works.
