To plan a successful vegetable garden it is vital to know how long your vegetables will take to grow. You need to plan where each vegetable is going to be planted, when they can be harvested, and what (if any) you can plant in their space once they have been harvested. Additionally when you are new to growing vegetables, focusing on some the easier and quicker to grow varieties is a great way to boost confidence and see quick results.

Personally I do not understand why more people do not grow turnips? They grow lightning quick into tennis ball sized roots and they can be grow quite close together. They are also nutritious and easy to prepare and cook. Check out the full list of the 12 fastest growing vegetables below, and order some non-GMO or organic seeds for the coming growing season.

The 12 Fastest Growing Vegetables To Grow
